Easy Report

An AI powered Framework for logging and
reporting physical defects

Presented by Bruce, Lin, Pau, Victoire

Current State of Problem Reporting

The screenshot shows a web form for reporting infrastructure issues in Zurich. At the top, there are navigation links: 'Eine Meldung erfassen' (active), 'Alle Meldungen', and 'Hilfe'. The main heading is 'Melden Sie Schäden und Mängel an der Infrastruktur von Zürich'. Below this, there is a section for 'Ungefähre Adresse des Schadens:' with a text input field and a 'Los' button. A button labeled 'Aktuelle Position verwenden' is also present. The form is divided into two main sections: 'Erfassen Sie eine neue Meldung:' and 'Kürzlich erfasste Meldungen:'. The 'Erfassen Sie eine neue Meldung:' section contains three numbered steps: 1. 'Ungefähre Adresse des Schadens', 2. 'Lokalisieren Sie den Schaden auf der Karte', and 3. 'Beschreiben Sie den Schaden'. Below these steps, there are two statistics: '205 Meldungen in der letzten Woche' and '905 bearbeitete Meldungen im letzten Monat'. The 'Kürzlich erfasste Meldungen:' section lists recent reports with their titles, timestamps, and small thumbnail images. The reports listed are: 'Neben PP Nr. 1 (PU 8342)' at 10:22 heute, 'Scooter' at 09:32 heute, 'Scooter' at 09:21 heute, 'Politisches Graffiti' at 08:14 heute, and 'Wäre toll, wenn die wachs' at 08:43 heute.

01

Inefficient

Reports must pass through multiple handoff chains before the right person is notified, causing delays and inefficiencies.

02

Limited Means of Expression

Strict form structures can prevent citizens from fully explaining the issue, causing valuable context and important details to be lost.

03

Incomplete Reports

Citizens may not fully understand what details are needed, leading to missing information.

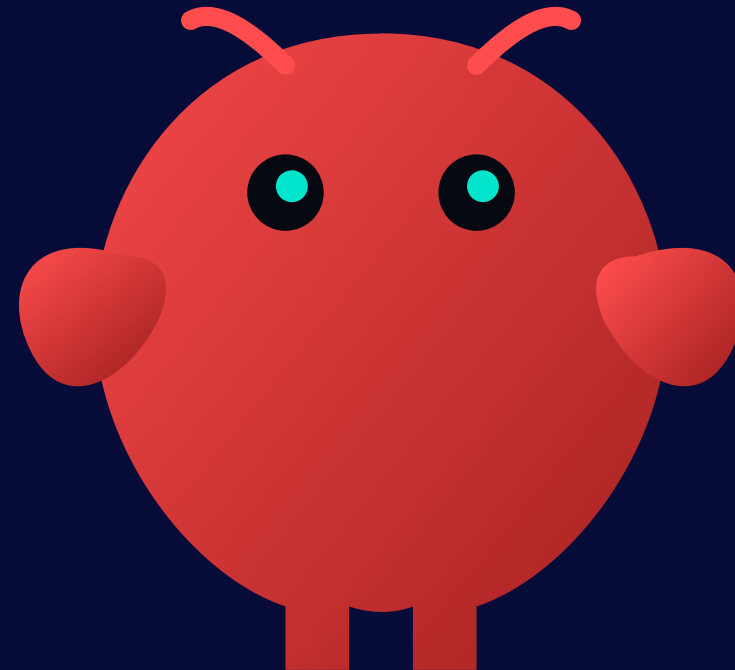

04

Slow and Manual

City staff may need to read each report, summarize it and relay the information

Our Solution

Combine the power of large language models and agentic frameworks to create an intelligent system that manages the information gathering and problem delegation all in one to alleviate the problems faced

01

Multimodal and Accessible interface

The person that is reporting can do so with the interface of preference either through natural language or through traditional means

02

Intelligent Information Gathering

All relevant information necessary is extracted from the user in a format custom to the problem thanks to the agentic system that can extract information case by case.

03

Intelligent Problem Delegation

Once the information has been extracted intelligently a report is made and sent to the responsible persons. the process is end to end without multiple chain handoffs.

04

Self Learning

The system allows for later feedback from the responsible person that fixes so that it can learn their preferences and the information that is need for them to gather next time.

Multiple reporting interfaces

Easy Report 10:38
Hello! I can help you report damage in Zürich. First, what is your name?

User 10:39
Hello, my name is Lawrence I would like to report a broken traffic light that I found while driving in Zurich.

Easy Report 10:39
Thank you, Lawrence. How should we recontact you if necessary?

User 10:39
through the same channel as this one

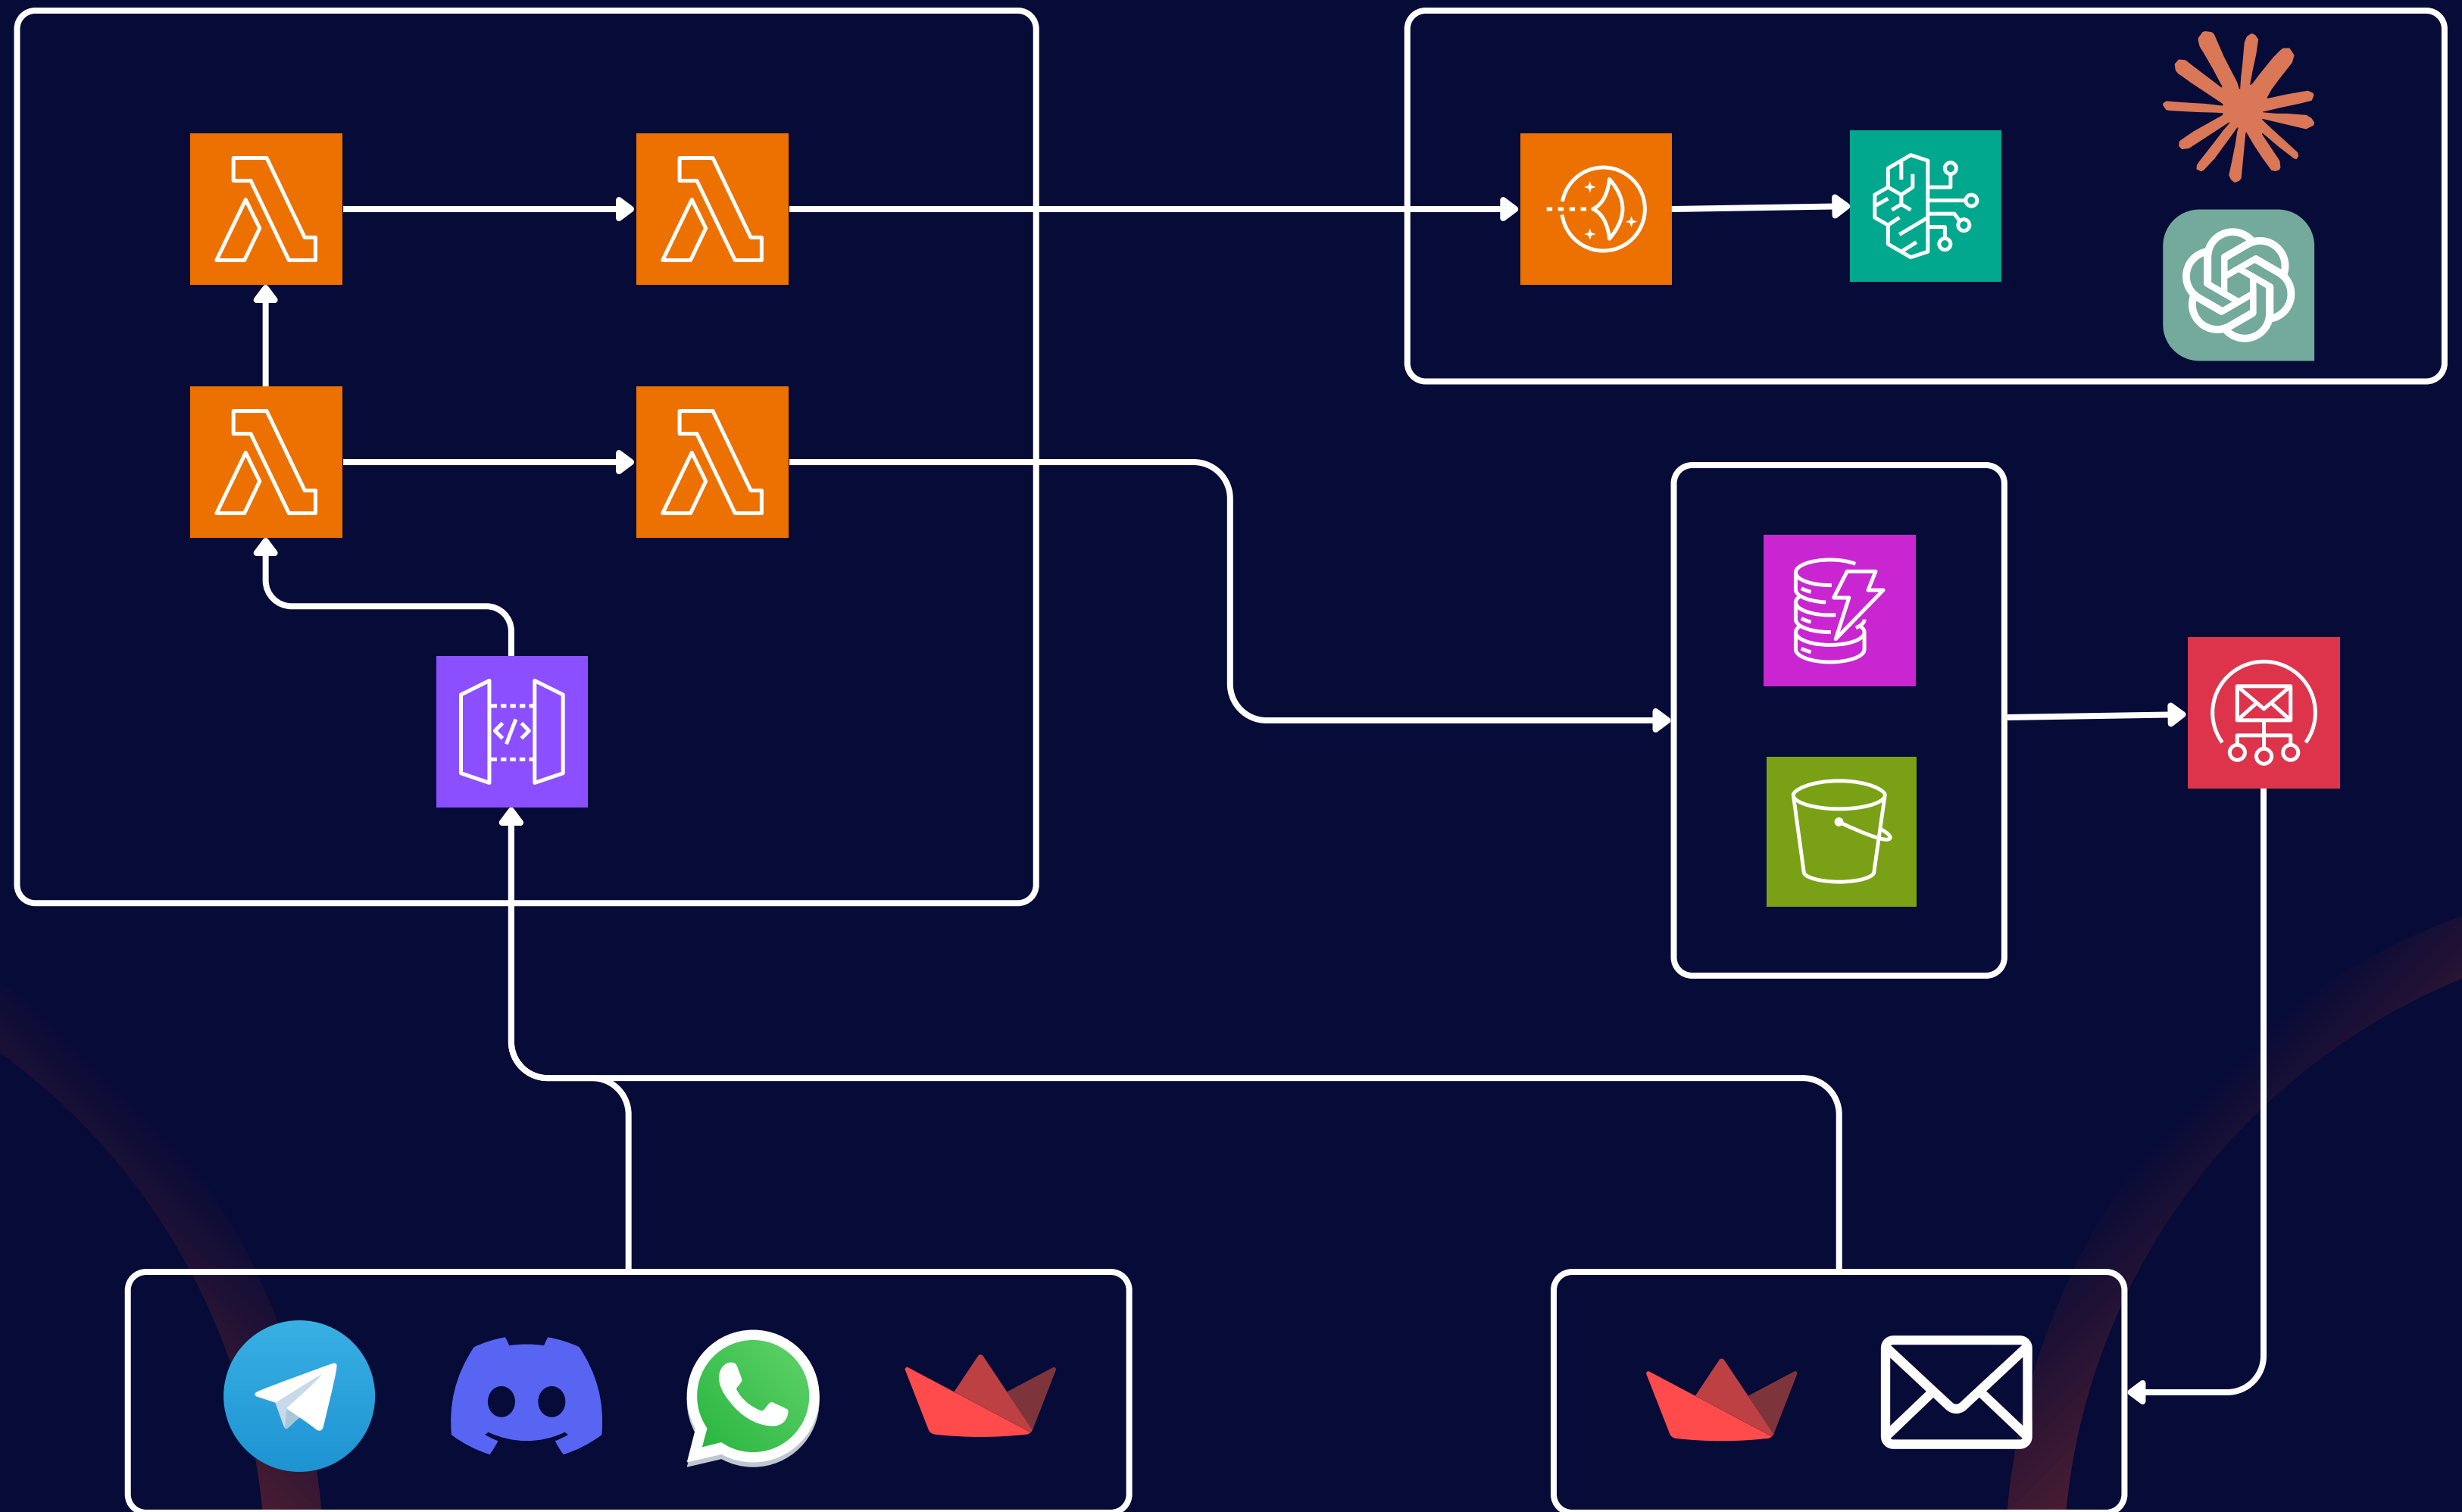

Easy Report 10:39
Great! Could you please share your location?

User 10:40
I am currently at Bahnhofstrasse, but the traffic light was at Pestalozzistrasse.

Easy Report 10:40
Thank you! Could you describe your issue in more detail?

User 10:42
Thev are not working. thev stav red while
